WHY CHOOSE ZURI SPRINGS?

Mixed-use development

Zuri Springs offers the market a safe investment in serviced and un-serviced plots in a master-planned development affordable for residential, commercial, industrial, educational, public purpose and recreational spaces. Buyers will also benefit from acquiring a clean and secure title deed to the land, which has significant growth potential.

Unique Features

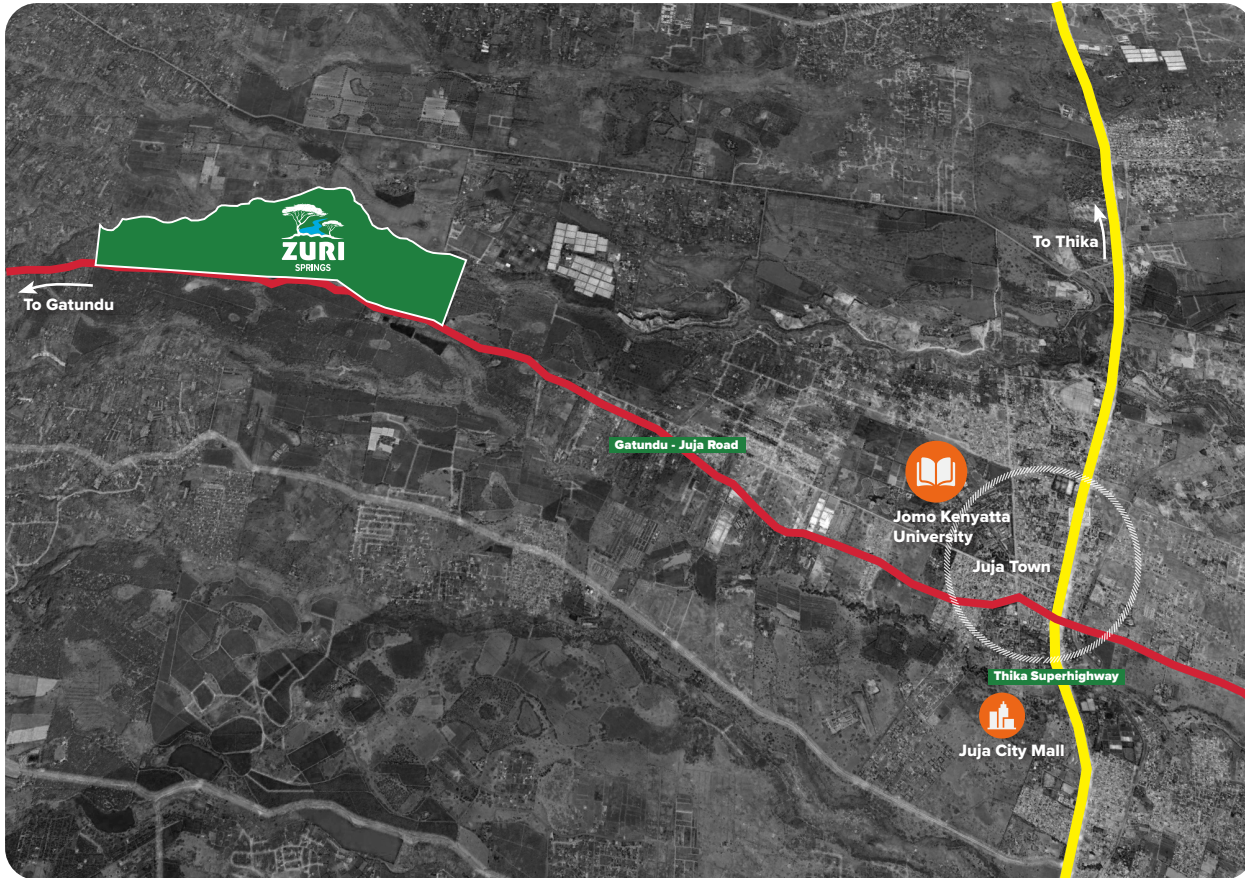

Zuri Springs features murram roads, power and water on-site, as well as a natural spring and dam, which nourish the development's lush vegetation and indigenous trees. The area offers beautiful views, fresh air and clement weather ideal for living.

Amenities

The development has on-site power, including three transformer points. A 220KV KETRACO bulk power line passes through the property. Zuri Springs has a picturesque dam free of wild animals and fed by the Ndarugo River through a furrow. There is a natural spring with an all-year-round supply of water used for domestic purposes.

Location map

Zuri Springs is approximately 40km north of Nairobi and 7km along Juja-Gatundu Road from the Thika Highway, which links the northern corridor of Nairobi and its burgeoning population to the centre of the Kenyan capital.
